VIBRO FLEX 7400

Vibro Flex 7400

The Kongskilde Vibro Flex 7400 is a heavy-duty cultivator for stubble cultivation and mulch tillage.

The Vibro Flex 7400 ensures an intensive preparation of the upper layer of the soil without changing the structure in depth. The soil preparation takes place at a minimum working depth followed by consolidation of the soil.

Thereby the best growing conditions and high growing reliability are secured, and this solution also increases the decomposition of plant residues and brings weed seeds and waste grains to germinate.

The Kongskilde Vibro Flex 7400 is available in the working widths 3-4-5-6 and 7 metre and can be delivered both as a trailed or fully mounted stubble cultivator. The fully mounted cultivator is, however, only available with a working width up to 6 metre.

The vibrating tines are mounted in 4 rows, and the tine spacing is 23 cm. The well-known share and tine programme from the existing Vibro Flex cultivators is used.

A large diameter rear-mounted roller ensures good contact between plant residues and soil, finishes the soil preparation and creates optimum conditions for a fast decomposition.

Vibro Flex 7400 trailed.

Levelling of Tine Marks

Long fingers, a "hockey stick" or a disc leveller can be mounted on the Vibro Flex 7400 for the levelling of tine marks before the rear-mounted roller.

Rear-mounted Roller

The rear-mounted roller precisely controls the depth operation.

Options

Vibro Flex 7400 can be fitted with a front-mounted row of disc sections for preparation of the soil before the preparation with tines.

Vibro Flex 7400 folded in transport position.

Technical Data

Model	VF 7425	VF 7430	VF 7440	VF 7450	VF 7460	VF 7470
